ZOOLOGICAL RESULTS OF THE GEORGE VANDERBILT SOUTH PACIFIC
EXPEDITION, 1937. PART I.—GALAPAGOS MOLLUSCA

BY JEANNE SCHWENGEL.

In the course of the George Vanderbilt South Pacific Expedition¹ of 1937, mollusks were collected at Chatham Island, Galapagos, and at Christmas Island, and cephalopods, which will be reported on separately, in various other localities. The following list includes beach shells picked up by Mr. Ronald W. Smith at Wreck Bay, Chatham Island.

<i>Tralia vanderbilti</i> J. Schwengel	<i>Nassa nodicincta</i> A. Adams
<i>Williamia galapagana</i> Dall	<i>Columbella fuscata</i> Sowerby
<i>Bulla rufolabris</i> A. Adams	<i>Columbella castanea</i> Sowerby
→ <i>Terebra variegata</i> Gray	<i>Columbella haemastoma</i> Sowerby
<i>Conus lucidus</i> Mawe	<i>Columbella atramentaria</i> Sowerby
<i>Conus nux</i> Broderip	<i>Anachis incerta</i> Stearns
<i>Cancellaria haemastoma</i> Sowerby	<i>Anachis suffusa</i> Sowerby
<i>Oliva kaleontina</i> Duclos (?)	<i>Mitrella cribraria guttata</i> Sowerby
<i>Olivella anazora</i> Duclos	<i>Murex radicans</i> Hinds
<i>Marginella phrygia</i> Sowerby	<i>Tritonalia erosa</i> Broderip
<i>Marginella minor</i> C. B. Adams	<i>Tritonalia lappa</i> Broderip
<i>Marginella rosa</i> J. Schwengel	<i>Aspella pyramidalis</i> Broderip
<i>Mitra tristis</i> Swainson	<i>Thais planospira</i> L.
<i>Mitra gratiosa</i> Reeve	<i>Thais columellaris</i> Lamarck
<i>Mitra crenata</i> Broderip	<i>Coralliophila californica</i> A. Adams
<i>Crassispira splendidula</i> Sowerby	<i>Cantharus sanguinolenta</i> Duclos
<i>Latirus varicosus</i> Reeve	<i>Cantharus cinis</i> Reeve
<i>Latirus tuberculatus</i> Broderip	<i>Cymatium lineatum</i> Broderip
<i>Tritonidea</i> sp.	<i>Cymatium wiegmanni</i> Anton
<i>Engina pyrostoma</i> Sowerby	<i>Oniscia tuberculosa</i> Sowerby

¹ An itinerary of the expedition will appear in a subsequent part of the Zoological Results.
