

122. *ligneola*, *Terebra* - REEVE, 1860, Conch. Icon., pl.
7, spec. 25 (nom. nov. pro *T. castanea* HINDS, 1844
— non KIENER, 1838). Hab. China; Fortune. Coll.
Cuming. Size of figure: 63.2 mm. Holotype: 63.0
mm; syntypes: 62.4 mm, and 57.2 mm. = *T. badia*
DESHAYES, 1859. 66

LIGNEOLA

REEVE 1860

= BADIA (248)

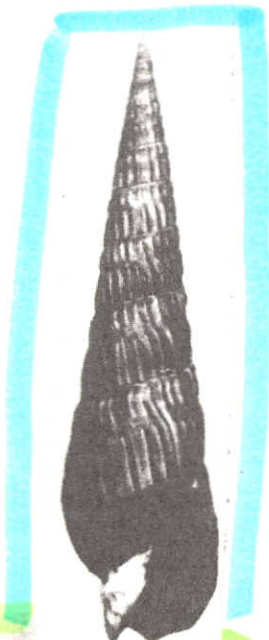

Ligneola (*Terebra*), Reeve. Conch. Ic., 25.
= *T. badia*, Desh.

TRYON 1885

Sp. 25. For *T. ligneola*, Reeve, read *T. badia*, Deshayes.

When correcting the error made by Mr. Hinds in taking this shell for M. Kiener's *T. castanea*, I did not perceive that the error had been already discovered and corrected by M. Deshayes.

REEVE 1860 CONCH. ICON. ADDENDA & CORRIGENDA

BRAT 87

248b

248b. Lectotype
of *Terebra ligneola* Reeve. British Museum (N.H.): 63.0 mm.
