

11

*Terebra medipacifica melior* n. subsp. Pl. XII, fig. 11.

A much larger form of this species was taken in Kaneohe Bay, Oahu. The brown markings are much reduced, but not more than in some Honolulu shells. There are 38 ribs on the last whorl.

Length 28, diameter 7, length aperture 8 mm.; 10 post-embryonic whorls.
