p. 269. = T. tantilla, Smith, 35
TANTON 1875

Myurella pumilio. p. 269

M. testa parva, subulata, sordide alba, infra suturam zona fusca, et in anfr. ultimo zonis duabus fuscis, altera supra, altera peripheriam infra, ornata; anfr. 11, convexiusculi, costis validis, arcuatis, vix obliquis, superne subtuberculatis (in anfr. ultimo 18-20 sensim ad basim obsoletis) instructi, et transversim inter costas exilissime striati, infra suturam leviter contracti; apertura parva, zonis duabus fuscis intus ornata; columella paululum obliqua, fusca, labio callo tenui juncta.

Long. 10 mill., diam. 2½.

Hab. — ?

A very small species, chiefly distinguished by the narrow brown band beneath the suture and the two which encircle the body-whorl. There is a slight depression at the upper part of the whorls, but scarcely forming an infrasutural belt; and the upper ends of the ribs terminate somewhat nodulously
