

EVANSII

CABE 1860

TEREBRA.

*T. Evansii*. Shell turritid, whorls about eight or nine, angulated above; suture distinct; surface polished and marked by an impressed line about a third of the width of the whorl from the upper edge; below marked by several faint revolving lines. Aperture subquadrate, columella somewhat prolonged, tortuous, and with two faint folds; outer lip sinuous, most prominent near the lower part of the mouth. Rather common.

*Dimensions*.—Length, 1 inch; width of body-whorl, .5 in.; length of aperture, .4 in.
