

TEREBRA (HASTULA) PATUXENTIA n. sp.

Plate XL, Fig. 14.

Description.—Shape like *inornata*, except that the sides of the whorls are flat. Entire shell covered with fine, close, distinct spiral lines. On the younger whorls are many narrow ribs running straight from suture to suture. On the lower whorls these become obsolete and irregular, remaining most distinct immediately below the suture.

Length (restored), 13 mm.; diameter, 3 mm.

Occurrence.—CHOPTANK FORMATION. Jones Wharf.

Collection.—Maryland Geological Survey. MARTIN G.C 1904 p. 145
