

EUTEREBRA

COTTON & GODFREY
1932

T.S. INCONSPICUA
= TRISTIS

Euterebra Cotton & Godfrey, 1932, S. Austr. Nat. 13 (2): 65.
Type species, *Terebra inconspicua* Pritchard & Gatliff,
1902 = *T. tristis* Deshayes, 1859, recent, Western Pacific.
"Small, regularly tapering; axial ribs numerous, faint; spi-
ral striae, microscopic; protoconch blunt, oblique, of 1½
smooth whorls; adult whorls numerous, telescopically ar-
ranged, flatly convex, slightly shouldered; suture well
defined."
