OXYMERIS
 DALL 1900

T.S. MACULATA.

Oxomeris Dall, 1903, Proc. U. S. Nat. Mus. 26, no. 1342: 951
 [footnote]. Type species, *Terebra maculata* Lamarck = *T.*
maculata (Linnaeus, 1758), recent, Indo-Pacific. The name
 was proposed in this fashion: "For the section of *Terebra*
 commonly called *Acus*, also a preoccupied name, I now
 suggest the designation of *Oxomeris*." He did not mention
 the author of the *Acus* he was replacing. In 1908, (*Nautilus*
 21 (11): 124), Dall diagnosed *Oxomeris* as having rapidly
 enlarging whorls. In 1923 Bartsch diagnosed it as "having
 a subsutural groove present only on early whorls."

B S C 1987

Section OXYMERIS Dall, 1900. (OCTEREBRA)
 Shell large, heavy, acute, the later whorls rapidly enlarging; the young as in
Subula, the sulcus not persistent in the adult, which has the later whorls smooth.
 Type *Terebra maculata* Lamarck. DALL 19096
 This is *Acus* Gray, 1847, not of Edwards, 1771.

- B. Sculpture in youth and age discrepant. Subgenus TEREBRA.
- 5. Young nodulous, sulcus persistent. Section *Myurella*.
 - 6. Young nodulous, sulcus present in youth. *Terebra* s. s.
 Young axially ribbed, sulcus persistent.
 - 7. Adult slender, smooth. *Subula*.
 - 8. Adult small, obsolete ribbed. *Abretia*.
 Sulcus obsolete in the adult.
 - 9. Whorls rapidly enlarging. *Oxomeris*.

Oxomeris Dall, 1900. *Terebra maculata* Lam.
 This is *Acus* Gray, 1847, not Edwards, 1771. DALL 1308A

Subgenus *Oxomeris* Dall, 1900 リュウキュウタケ亜属

DEF SUBULA SCHONHAEDEL

Type species: *Buccinum maculatum* Linnaeus リュウキュウタケ

Syn. *Acus* (Humphrey) Swainson, 1840 (non Müller, 1767; nor
 Edwards, 1771)

縫合下帯を区切る溝は体層近くで退化する.
