47. *Terebra Belcheri* Ph.

T. testa longissime turrata, subulata, albida, rufo-fusco marmorata anfractibus numerosis (ultra 20), planis, confertim transverse striatis, in parte superiore cingulis duobus granorum, in parte inferiore costis rectis sculptis; anfractu ultimo abrupte in canalem breviusculum, subreflexum terminato; apertura oblonga; columella arcuata. Long. 19''; lat. 3<sup>3</sup>/<sub>4</sub>''.

Patria: . . ? (ex itinere Belcheri.)

Cingula granulorum subaequalia, supremum suturale, secundum exacte supra lineam dimidiam anfractus altitudinem indicante; costae perpendiculares a granulis cinguli secundi incipiunt, et in anfractu ultimo cingulo nodulorum minorum suturam continuante instructae. Pars superior aufractuum albida, inferior plerumque pallide rufo fusca, albo marmorata, anfractus ultimus plerumque rufo fuscus, zona alba cinctus.

Magnitudine et forma exactissime convenit cum *T. straminea* Gray (cfr. Sowerb. thesaur. fig. 22) sed differt cingulis granorum *duobus*, sulcis transversis nullis etc.; a *T. rudi* Gray (cfr. Sowerby thes. f. 60) differt testa longe graciliore, cingulis *duobus* distinctis granorum; lineis transversis longe pluribus etc. PHILIPPI 1851 Zeit. f. Mal. p. 123
